

Contents

Preface	9
Chapter A: Patho-biology of the dental pulp	11
1. General structural aspects	11
2. Pathogenesis of disease and dynamics of repair	12
3. Terminology for cells and matrices	15
4. Phenotype of the formative cells	16
Chapter B: Primary dentinogenesis	25
1. Generation of odontoblast-cell lineage	25
2. Odontoblast differentiation	27
3. Mechanisms controlling odontoblast differentiation	31
4. Formation of the primary dentin	32
Chapter C: Dentinogenesis in the traumatized pulp	41
1. Dentinogenesis after local dentinal injury	41
2. Dentinogenesis after general ischaemic injury.....	43
3. Dentinogenesis after surgical pulp stimulation	43
4. Dentinogenesis after co-ordinated surgical and chemical or biological stimulation	44
5. The inductive ability of calcium hydroxide	46
6. Origin of odontoblast-like cells in the traumatized pulp	49
Chapter D: Experimental dentinogenesis	57
1. Dentinogenic events in <i>in vitro</i> models	57
2. Reparative dentinogenesis in <i>in vivo</i> models	60
Chapter E: Induction of reparative dentinogenesis in an intrapulpal in vivo model	65
1. Experimental work	65
2. Part I: Auto-induction of dentinogenesis	67
3. Part II: The role of fibronectin	71
4. Part III: The role of growth factors	74
5. General discussion	78
Apendix	85
Epilogue	101
