

CONTENTS

PART I: CONCRETE

1.	CEMENT	15
1.1.	Definition	15
1.2.	Constituents	15
1.2.1.	Main constituents	16
1.2.1.1.	Portland cement clinker (K)	16
1.2.1.2.	Granulated blastfurnace slag (S)	16
1.2.1.3.	Pozzolanic materials (P,Q)	16
1.2.1.4.	Fly ashes (V, W or C,F)	17
1.2.1.5.	Burnt shale (T)	17
1.2.1.6.	Limestone (L, LL)	17
1.2.1.7.	Silica fume (D)	18
1.2.2.	Minor additional constituents	18
1.3.	Chemical composition	18
1.4.	Cement types	19
1.4.1.	Common cements (CEM)	19
1.4.2.	Special cements	20
1.5.	Mechanical and physical requirements	22
1.5.1.	Strength	22
1.5.2.	Initial setting time	23
1.5.3.	Soundness	23
1.6.	Chemical properties	23
1.7.	Durability	23
2.	WATER	25
2.1.	Types of water	25
2.2.	Requirements	26

3.	AGGREGATES	27
3.1.	Definitions	27
3.2.	Geometry of aggregates	27
3.2.1.	Size	27
3.2.2.	Grading	27
3.2.3.	Shape	28
3.3.	Physical requirements	29
3.3.1.	Density	29
3.3.2.	Resistance to fragmentation	30
3.3.3.	Resistance to wear	30
3.3.4.	Polished Stone Value (PSV)	30
3.3.5.	Aggregate Abrasion Value (AAV)	30
3.3.6.	Water absorption	30
3.3.7.	Porosity	30
3.4.	Chemical requirements	31
3.4.1.	Chlorides	31
3.4.2.	Sulfur containing compounds	32
3.4.2.1.	Acid-soluble sulfate	32
3.4.3.	Total sulfur	32
3.5.	Mechanical (or engineering) properties	32
3.6.	Synthetic aggregate	33
3.7.	Durability of aggregates	33
3.7.1.	Freezing/thawing resistance of coarse aggregate	33
3.7.2.	Volume stability -drying shrinkage	34
3.7.3.	Alkali-silica reactivity	34
4.	MINERAL ADDITIVES	35
4.1.	Pozzolans	35
4.2.	Fly-ashes	36
4.2.1.	Physical requirements	36
4.2.2.	Effect of fly - ash into concrete	36
4.2.2.1.	Fresh concrete	37
4.2.2.2.	Hardened concrete	37
4.2.3.	Durability	38
4.3.	Silica fume	38
4.3.1.	Physical characteristics	38
4.3.2.	Chemical characteristics	39
4.3.3.	Effect of silica fume on concrete	39
4.3.3.1.	Fresh concrete	39
4.3.3.2.	Hardened concrete	39

4.3.3.3	Durability	40
4.4.	Blast furnace slag	41
4.4.1.	Physical properties	41
4.4.2.	Effect of BFS on concrete properties	41
4.4.2.1.	Fresh concrete	42
4.4.2.2.	Hardened concrete	42
4.4.2.3.	Durability	42
4.5.	Overall evaluation	42
5.	CONCRETE	455
5.1.	Definition	45
5.2.	Types of concrete	46
5.3.	The fresh concrete	47
5.3.1.	Slump	47
5.3.2.	Compaction	48
5.3.3.	Flow	48
5.3.4.	Water/cement ratio (w/c)	49
5.3.5.	Air entrained	50
5.4.	Hardened concrete	51
5.4.1.	Compressive strength ($f_{c,cube}$)	51
5.4.2.	Tensile (flexural) strength	52
5.4.3.	Resistance to water penetration	52
5.4.4.	Reaction to fire	52
5.5.	Curing	54
5.6.	Durability	54
5.7.	Mix-design	55
6.	SPRAYED CONCRETE	57
6.1.	Mixing	57
6.1.1.	Dry-mix method	57
6.1.2.	Wet-mix method	58
6.2.	Properties	59
6.2.1.	Physical	60
6.2.2.	Mechanical	62
6.3.	Durability	63
6.3.1.	Mix design	63
6.3.2.	Specifications	63
6.3.3.	Competence	63
6.3.4.	Conclusion	64
	References	64

PART II: ADMIXTURES

7.	INTRODUCTION	67
7.1.	Definition	68
7.2.	History	68
7.3.	Market Data	69
7.4.	Admixture Types	70
7.5.	General Remarks	70
7.5.1.	Chemical and Physical Properties of Admixtures	72
7.5.2.	Admixture - Cement Interaction	72
7.5.3.	Admixture Blends	73
7.5.4.	Time of Addition	73
7.6.	How to choose the right admixture	74
8.	WATER REDUCING ADMIXTURES	75
8.1.	Definition	75
8.2.	History	75
8.3.	Chemistry Overview	76
8.3.1.	Polysaccharides	77
8.3.2.	Naphthalenesulfonates (BNS)	77
8.3.3.	Lignosulfonates (LS)	78
8.3.4.	Melaminesulfonates (MFS)	79
8.3.5.	Polycarboxylates (PEC)	80
8.4.	Mode of Action	81
8.4.1.	Electrostatic Repulsion	81
8.4.2.	Steric Effects	82
8.5.	Performance of Water Reducing Admixtures	82
8.5.1.	Workability	82
8.5.2.	Influence of Temperature	83
8.5.3.	Water / Cement Ratio and Compressive Strength	84
8.5.4.	Durability	85
8.5.4.1.	Durability Factors	86
8.6.	Economic and Environmental Aspects	87
8.6.1.	Cement saving	87
8.7.	An Overview	89
9.	ACCELERATORS	91
9.1.	Set Accelerators	91
9.1.1.	Definition	91

9.1.2.	Types of Set Accelerators	91
9.2.	Hardening Accelerators	92
9.2.1.	Definition	92
9.2.2.	Types of Hardening Accelerators	92
9.3.	Mode of Action	92
9.3.1.	Cement Hydration	94
9.4.	Performances	95
9.4.1.	Strength Development	95
9.4.2.	Flash Setting	96
9.4.3.	Influence of Temperature	96
9.5.	Sprayed Concrete Accelerators	97
9.5.1.	Definition	97
9.5.2.	Chemistry	98
9.5.3.	Performance	98
9.5.4.	Application	99
9.6.	An Overview	101
10.	RETARDERS	103
10.1.	Definition	103
10.2.	Mode of Action	103
10.3.	Performance	103
10.4.	Heat Development	105
10.5.	An Overview	106
11.	AIR ENTRAINERS (AE)	107
11.1.	Definition	107
11.2.	Mode of Action	107
11.3.	Air Distribution	108
11.4.	Performance	108
11.4.1.	Compressive Strength	108
11.4.2.	Durability	109
11.5.	An Overview	112
12.	DEFOAMERS	113
12.1.	Definition	113
12.2.	Mode of Action	113
12.3.	Performance	113
12.3.1	Strength	113
12.3.2.	Flowability	114
12.4.	An Overview	116

13.	SPECIAL ADMIXTURES	117
13.1.	Viscosity Modifying Admixtures (VMA's)	117
13.1.1.	Definition	117
13.1.2.	Types of VMA's	117
13.1.3.	Mode of Action	117
13.1.4.	Self Compacting Concrete (SCC)	117
13.2.	Pumping Aids	118
13.2.1.	Definition	118
13.3.	Anti-washout / Underwater Concrete Admixtures	119
13.3.1.	Definition	119
13.4.	Corrosion Inhibitors	119
13.5.	Truck Washwater Admixtures	119
13.5.1.	Definition	119
13.6.	Water Resisting - Hydrophobing Admixtures	120
13.6.1.	Definition	120
13.7.	Bleeding reducing Admixtures	120
13.7.1.	Definition	120
13.8.	Shrinkage Reducers (SRA)	120
14.	COMPLEMENTARY PRODUCTS	123
14.1.	Curing Agents	123
14.1.1.	Mode of Action	123
14.1.2.	Performance	123
14.2.	Form Release Agents (Demoulding Agents)	125
14.2.1.	Mode of Action	125
14.2.2.	Performance	125
14.3.	An Overview	126
15.	SAFETY - HEALTH - ENVIRONMENT	127
15.1.	Introduction	127
15.2.	General remarks and Toxicity	127
15.3.	Leaching	128
15.4.	Drinking Water	129
15.5.	Air Pollution	129
15.6.	Life Cycle of Admixtures	129
15.7.	General ecological considerations	130
	References	131
